

Built Strong to Cut Fast & Last Long

- Mount on skid steer, loader or telehandler
- Easily ration bales by splitting them in half
- Retains plastic wrap and netting
- Preprocess bales for mixers
- Reduces grinding time by up to 50%, reducing wear and tear on your equipment

Maxilator Mega Splitter

Designed with the American farmer in mind.

Using the average hydraulic flows and pressure, and the weights and lifting capacities of common tractors, this is a heavy duty and powerful machine.

The **Maxilator Mega Splitter** easily slices through round bales and retains bale net or wrapping to prevent entanglement in mixer mechanisms or contamination of rations.

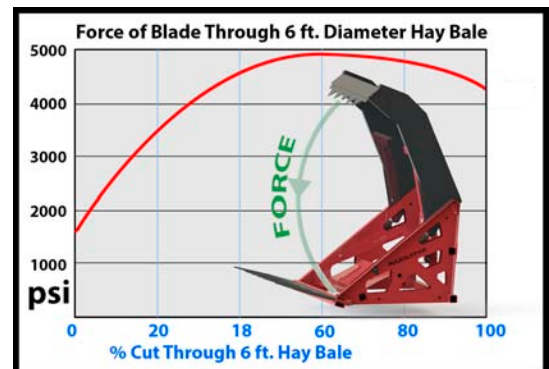

Open height 84", closed height 42", width 50" without spears, 89" with spears in the machine. Length 91", weight 1349 lbs, hydraulic connection double-acting.

The Maxilator Bale Splitter grips the plastic wrap, net wrap & twine while splitting the bale in half for easy feeding in hay rings, alleys and mixer wagons.

Measurement made with 3000 psi of hydraulics

Maxilator, makers of the Accumagrapple small bale harvester, serves the american farmer with practical & economical innovation.
