HAY HANDLING EQUIPMENT

Inline Mower Caddy

The Maxilator Mower Caddy is designed to help the farmer save time and money. Our Hydraulic Inline Mower Caddy is easy to hook up to your tractor by allowing one man to back up to the Caddy and insert the hitch pin. The Disc Mower remains attached to the Caddy and the weight of the Disc Mower stays off the Tractor. The inline design, counter balance weighting, and parallel wheels of the Maxilator Mower Caddy make it more stable with improved turning over the offset wheel design. This unit will also help extend the life of your tractor.
